

PubSub+ Infrastructure Deployment and Configuration

The Solace PubSub+ Platform can be deployed in many environments, including public and private clouds, on premises in data centers, and as a managed service in any of these environments. This diversity allows the platform to support multiple varied and unique hybrid environments.

This pack brings the experience and expertise of Solace Professional Services to help customers to get the most out of their PubSub+ deployments, and to set a baseline for future deployments to carry

forward best practices learned through this service.

The Infrastructure Deployment and Configuration packaged service establishes a plan for the deployment and configuration of the PubSub+ Platform components on specific customer infrastructure, execute the plan, and provide runbooks/documentation to allow customers to continue running the deployments and add to them as required.

Activities Included

Defining configuration details

Collaborate with the customer to define and document the actual Solace environment, based on the predefined architecture and design

Cover all aspects of the environment, including (based on broker type and architecture)

- Physical installation
- Network/storage
- Virtual machines/bare-metal servers
- Solace broker configuration, including HA and DR
- Security integration

Creating installation checklist(s)

Define checklist(s) detailing each step and command needed to install, configure, and verify each Solace component in the environment

Installing, configuring, and testing Solace brokers according to checklists

- Execute Solace component setup and validation based on defined checklist(s)
- Provide completed checklist to customer

Defining /reviewing runbook

Provide a template of Solace-based procedures to either include in an existing client-authored runbook or as a basis for new runbook to be completed and maintained by the client.

Benefits

- Solace Professional Services have vast and varied experience deploying and configuring PubSub+ in a wide variety of environments, from on-premises data centers, to public clouds, to private clouds.
- Solace Professional Services help make complex deployments –high availability (HA), disaster recovery (DR) with software, cloud, or appliance brokers, that can connect together in an event mesh–easier and repeatable.
- Customers receive runbooks, checklists and knowledge transfer so they are able to efficiently keep the deployment healthy and operational after the Solace Professional Services engagement is finished.

Pricing and Duration

- This service starts at 160 hours with a Solace Professional Services consultant.
- Pricing starts at \$33,000.
