Solace PubSub+ Event Broker Migration

Migrating from an existing Solace PubSub+ event broker to a newer, more modern version requires careful design and meticulous migration preparation and planning.

How do I migrate from existing appliances which are about to reach end-of-support to the latest and greatest appliances that Solace has to offer? Can I migrate from hardware appliances to software event brokers or even to Solace Cloud? What is required for my existing applications? Are there any changes required? These are just a few from a myriad of questions that the middleware or application team faces when considering migrating the Solace event brokers.

Solace Professional Services knows best what and how to migrate your Solace PubSub+ event brokers to the newer or more modern Solace event brokers that are available today. We know how to minimize the risk associated with migrating your production, mission critical, business impacting deployment by applying our experience in migrating 100s of deployments.

This service package creates a migration runbook document for you and your team. We study your existing and new Solace deployments, provide advice on the best migration approach, and work through the migration process with you and your team from inception to completion.

Activities Included

The event broker migration package covers all aspects of migrating required for a successful Solace event broker migration:

Migration Planning
Whether you're migrating from one type of event broker to another (e.g. appliance to software) or physically relocating event brokers, we will study your existing and planned Solace deployments and suggest a migration path that meets your needs with minimal impact on your application users and business.

Migration Runbook and Rollback Plan
We develop a step-by-step migration runbook and share it with your team, as well as your application/networking/ infrastructure teams, if necessary, to ensure the migration process is well understood by all parties involved. We will also provide a rollback plan in case anything goes wrong.

Pre Migration Target Deployment Health Assessment
We conduct an operational readiness check on your planned Solace deployment to ensure that it can provide, at a minimum, equivalent capabilities, and performance.

Migration Execution
We carry out the migration plan together with your middleware and application team. We map the configuration of your existing event brokers to the event brokers that you are migrating to. We understand migration during non-business hours is often the norm for production environments and support you in doing so.

If you need help installing brokers prior to the migration, consider the event broker Installation Package. And if you need help upgrading event brokers as part of the migration, consider the event broker Upgrade Package for more information.

Application Migration Assistance
Before starting any migration, we evaluate potential application/business impact, and help you overcome any issues you encounter during the migration. We offer a single point of contact for all your questions and will troubleshoot through live sessions with you when necessary.

Why use Solace Professional Services?

- Product experts with the experience and technical expertise needed to ensure broker migration success

- Migration runbook your team can use as a building block for future migrations

Pricing and Duration

This service typically takes about 1 week working with a senior consultant.

Pricing starts from $18,000 for migration of 2 event brokers/Solace Cloud instances as standalone or in high availability (HA) pair. An add-on pack can be purchased for $6,000/ pack which includes up to 2 additional event brokers/ Solace Cloud instances. For physical migration of appliances from one data center to another, Solace appliance specific packaging can be ordered separately.
