

Solace Expert Advisory

The Solace Expert Advisory service comes with a dedicated Expert Advisor that works with your application and operational teams and provide expert hands-on guidance and assistance for planning, deploying, and evolving event-driven applications.

Each Expert Advisor brings extensive Solace technical experience, and while engaged as a long-term advisor to the enterprise, they help deliver your business outcomes faster and effectively through structured & customized strategies and event driven methodology.

Successful Event Driven Architecture (EDA) initiatives often transition from tactical investments, like putting your first event driven application into production, to more strategic deployments. This is where EDA begins to take a role in the organization's business and technical innovation with an increasingly cross-organizational significance, requiring multi-year commitments.

This multi-year engagement is designed to provide on-going enablement, advice, and expertise so you can scale, onboard new use cases, avoid issues, and achieve your enterprise's long-term innovation goals.

HOW WE HELP

Solace Expert Advisory engagements are customized to align with your enterprise requirements & objectives, whether you are just starting with your EDA initiatives or looking for expert guidances on existing advanced or complex projects.

Advanced competence in EDA is typically built over time and requires investment in the technology, skills, policies and culture of your organization. Mastery of EDA is essential to a modern digital business, and achieving this mastery is a multistep process. Our Expert Advisors engage your organization with a long-term vision, helping to achieve key business outcomes on your road to achieving EDA mastery.

We do this by building organizational maturity across five key practices:

KEY DELIVERABLES

- Adoption activities to achieve your first value with Solace products and build a solid foundation for future growth
- Architecture and design workshops and on-going review for existing and new use cases
- Long-term EDA and platform strategy for increasingly advanced outcomes from the use of EDA with Solace
- On-going education for teams to solve problems with EDA design patterns and event driven design reusability
- Product deployments including strategies for high-availability and business continuity
- On-going reporting to help measure ROI and business outcomes

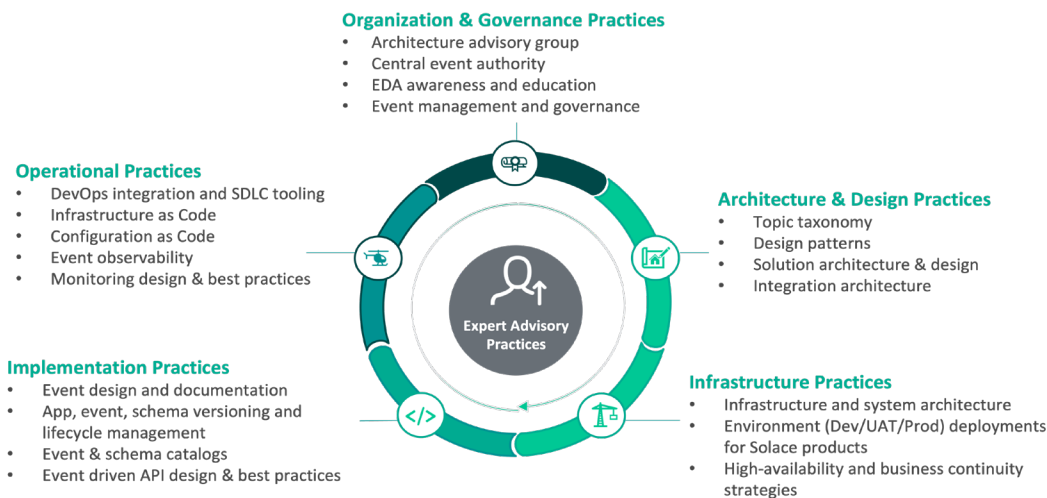

Why Solace Expert Advisory?

- Dedicated long-term advisor that understands your environment, and organization with the experience and technical expertise on EDA with Solace
- Single point of technical contact to provide consistency
- Continuous architecture, design, implementation and education as your use cases scale and evolve
- Maximizes ROI on your Solace Platform by reducing time to business value with a repeatable methodology

Plans and Duration

Available with Solace Essential Support or Advanced Support Annual Subscription Plans.

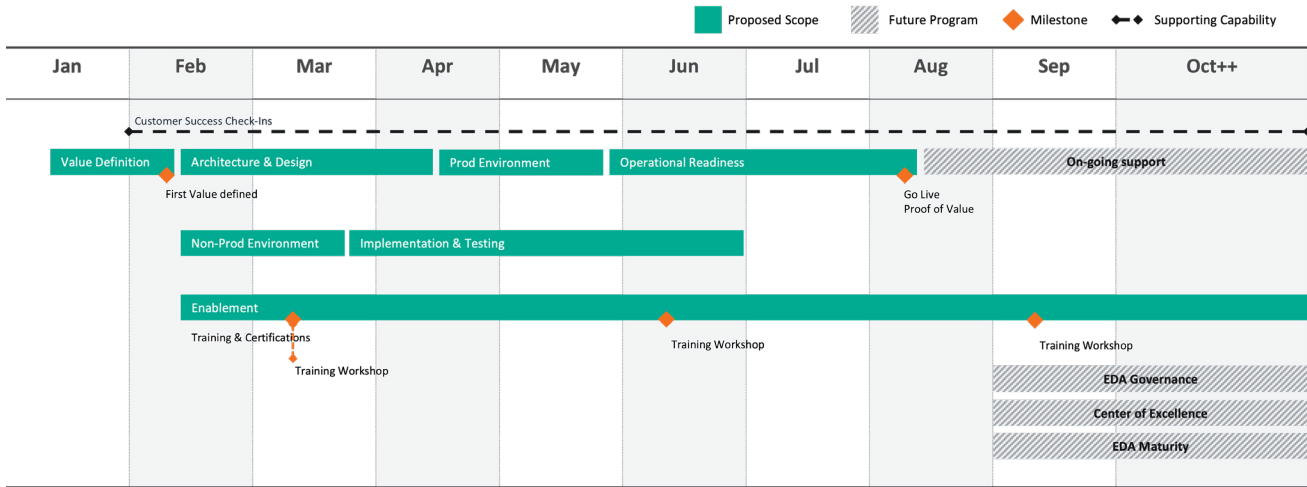

All Expert Advisory services are designed as multi-year engagements to provide on-going advise and support that build your organization's EDA mastery and maturity.

OUR ADOPTION METHODOLOGY

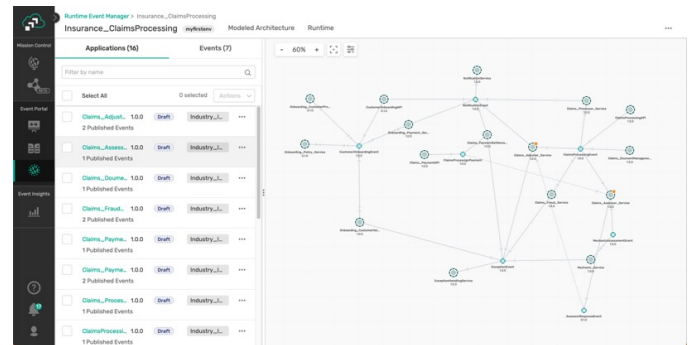

It is important to establish a solid foundation with your Solace infrastructure to ensure success as you scale and deploy new applications. Not every enterprise, however, has the necessary in-house expertise to get started on the right foot. Using our adoption methodology, Expert Advisors establish that solid foundation by understanding your business goals and defining the first value to achieve with your Solace products. They lead you through the necessary activities to achieve that value, tracking and reporting on progress along the way.

The following provides a high-level conceptual roadmap example of adoption activities to achieve your first value with Solace.

MODELING YOUR EDA

The Expert Advisor helps to implement proper event management by modelling your EDA via PubSub+ Event Portal and AsyncAPI schemas that can be imported into your own Event Portal and/or integrated with your own SDLC tools, enabling better collaboration between architecture and development team. This further allows you to keep your EDA documentation up to date, and complex to model changes without impacting downstream applications.

CUSTOMIZING SOLACE EXPERT ADVISORY

Each Expert Advisory engagement can be customized to meet your business needs. Here are some other ways you can leverage an Expert Advisor:
